To Whom It May Concern,

Best Mold Technologies, LLC, partnered with Cameron University Database Class, instructed by Professor Dave Smith, during the spring 2016 semester. Professor Smith has a very well designed course in which he teaches the application of database design through to implementation. The class curriculum grants a company or organization the opportunity to present their business operations to the students, while in turn providing the students an opportunity to see the full benefit of implementing the database they created within the organization. The students work in teams, in which they prepare a database for the company based on the presentation and weekly participation presented by the client.

Mr. Don Brogdan was a student in Professor Smith's database class who worked on the project with BMT. As the owner/operator of BMT, I was very impressed with the students' high understanding of database design and management which incorporated Microsoft SQLServer and Access. The students also demonstrated an understanding of this project and how databases are highly accepted and utilized in the corporate world today. In addition, this project allowed the class to gain an awareness of what companies/organizations are looking for when they hire a database administrator.

BMT highly recommends Mr. Brogdan for employment. Mr. Brogdan has been thoroughly challenged by the project and as a result, has a further developed knowledge of today's business environment. Professor Smith's database class prepares students for real world database applications, while allowing them to see what challenges they will be presented once they enter the workforce. The class is a great stepping stone in preparing students for their future in database technology.
